Subject: Item Description Needed

Can you please send a short description of each item please..

- 1) B 3 This is a blood builder that is used 5-6 days prior. Usually it takes 2 weeks to see results. The dosing is once every two weeks. I would really stay low key on this one.
- 2) BPR Blue Strong analgesic. Like other products I would start with ½ cc IV and work my way up.
- 3) ITTP Plus: ITTP plus other ingredients. ITTP increases oxygen release. Compared to what's sold online its lets than ½ the price. Most people are using ½ bottle night before and remainder of bottle 4-5 hours before event.
- 4) VO2 Max: HP Bleeder plus with additional ingredients. Usually 10 mls 4-5 fors prior to race.
- 5) P3 Pentosan Platinum Plus: Equivalent to dose of pentosan and 1 bottle of Polyglycan

I have other products and will start organizing them. I have stuff you can use the day before that is far better than bute and banamine on many levels.

thanks Lisa
